

## The Benefits of Massage

### Bodywork Goes Beyond Relaxation

As you lie on the table under crisp, fresh sheets, hushed music draws you into the moment. The smell of sage fills the air and you hear the gentle sound of massage oil being warmed in your therapist's hands. Once the session gets underway, the daily stressors and aching muscles fade into an oblivious 60 minutes of relief, and all you can comprehend right now is not wanting it to end.

But what if that hour of massage did more for you than just take the pressures of the day away? What if that gentle, Swedish massage helped you combat cancer? What if bodywork helped you recover from a strained hamstring in half the time? What if your sleep,

cultures. Touching is a natural human reaction to pain and stress, and for conveying compassion and support. When you bump your head or have a sore calf, the natural response is to rub it to feel better. The same was true of our earliest ancestors.

Healers throughout time and throughout the world have instinctually and independently developed a wide range of therapeutic techniques using touch. Many are still in use today, and with good reason. We now have scientific proof of the benefits of massage -- benefits ranging from treating chronic diseases and injuries to alleviating the growing tensions of our modern lifestyles. Having a massage does more

Along with easing stress -- the No. 1 cause of disease -- massage has a long list of benefits.

digestion, and mood all improved with massage and bodywork? What if these weren't just "what if's"?

Evidence is showing that the more massage you can allow yourself, the better you'll feel. Here's why:

Massage as a healing tool has been around for thousands of years in many

than just relax your body and mind -- there are specific physiological and psychological changes that occur, and even more so when massage is utilized as a preventative, frequent therapy and not simply mere luxury. Massage not only feels good, but it can cure what ails you.

## The Fallout of Stress

Experts estimate that 80 percent to 90 percent of disease is stress-related. Massage and bodywork is there to combat that frightening number by helping us remember what it means to relax. The physical changes massage brings to your body can have a positive effect in many areas of your life. Besides increasing relaxation and decreasing anxiety, massage lowers blood pressure, increases circulation, improves injury recovery, encourages deep sleep, and increases concentration. It reduces fatigue and gives you more energy to handle stressful situations.

Massage is a perfect elixir for good health, but it can also provide an integration of body and mind. By producing a meditative state or heightened awareness of the present moment, massage can provide emotional and spiritual balance, bringing with it true relaxation and peace.

The incredible benefits of massage are doubly powerful if taken in regular "doses." Researchers from the Touch Research Institute (TRI) at the University of Miami, found that recipients of massage can benefit even in small doses (15 minutes of chair massage or a half-hour table session). They also note that receiving bodywork two to three times a week is even more beneficial. While this may not be feasible, it's nice to know that this "medicine" only gets better with frequency.

## What It Does

In an age of technical and, at times, impersonal medicine, massage offers a drug-free, non-invasive, and humanistic approach based on the body's natural ability to heal itself. Following is a brief list of the many known, research-based benefits of massage and bodywork:

- Increases circulation, allowing the body to pump more oxygen and nutrients into tissues and vital organs;
- Stimulates the flow of lymph, the body's natural defense system, against toxic invaders. For example, in breast cancer patients, massage has been shown to increase the cells that fight cancer.

Furthermore, increased circulation of blood and lymph systems improves the condition of the body's largest organ -- the skin;

- Relaxes and softens injured and overused muscles;
- Reduces spasms and cramping;
- Increases joint flexibility;
- Reduces recovery time and helps prepare the body for strenuous workouts, reducing subsequent muscle pain of athletes at any level;
- Releases endorphins -- the body's natural painkiller -- and is proving very beneficial in patients with chronic illness, injury, and post-op pain;
- Reduces post-surgery adhesions and edema and can be used to reduce and

realign scar tissue after healing has occurred;

- Improves range-of-motion and decreases discomfort for patients with low back pain;
- Relieves pain for migraine sufferers and decreases the need for medication;
- Provides exercise and stretching for atrophied muscles and reduces shortening of the muscles for those with restricted range of motion;
- Assists with shorter labor for expectant mothers, as well as reduces the need for medication, eases postpartum depression and anxiety, and contributes to a shorter hospital stay.

The benefits of massage are diverse. No matter how great it feels, massage isn't just a luxury; it's a health necessity.

**To get the full benefits of massage, take it easy after your session and let it soak in.**

# Relief for Computer Users

Mary Betts Sinclair

According to the American Optometric Association, 46 percent of Americans spend at least five hours a day on a computer or smartphone. When looking at a screen, many people hold their head forward of center and slouch, which puts many upper-body muscles in a shortened position.

HERE ARE SOME WAYS TO AVOID PAIN AND STRAIN:

Computer users tend to blink very little and stare straight ahead, not using their peripheral vision. Be sure to keep blinking, which washes your eyes in naturally therapeutic tears and breaks up your stare.

Take frequent rest breaks using the 20-20 Rule: every 20 minutes, spend 20 seconds looking at something far away, preferably gazing out a window. Also, stand up and move as much as possible. This is a great time to do eye-muscle stretches and range-of-motion exercises for your back and neck. Use your fingertips to gently

massage around your eyes, temples, and forehead. Finally, rub your palms together and gently cup your closed eyes. Relax and breathe freely.

Make sure you have good light, and check that your monitor is the correct distance away from your eyes and at the right height. Also, adjust the screen settings to where they are comfortable in terms of resolution and flicker.

If you wear eyeglasses, have them checked. For example, in order for some people to see clearly with their heads held in an upright and balanced position, and without chronic tightness in the back of the neck, they may need to have a prescription for a longer focal length or larger bifocal inserts, or have an adjustment of their eyeglass frames if they are bent or twisted. Some people may need a stronger or weaker prescription. If your doctor has prescribed a pair of glasses specifically for seeing the computer screen, wear them.

Mary Betts Sinclair is an Oregon-based educator and bodyworker. Learn more about her at [www.marybettsinclair.com](http://www.marybettsinclair.com).

Take frequent breaks to avoid eye strain.

# Good News About Ginger

Shelley Burns

Ginger (*Zingiber officinale*) is known to aid digestion and strengthen the immune system. It is used as a home remedy (flat ginger ale) when feeling under the weather or nauseous, and is blended with honey and lemon in a drink to ward off a cold or flu. Now ginger has come back into the spotlight, this time to promote healthy skin.

One of ginger's active enzymes--zingibain--reduces inflammation, therefore reducing the risk of acne, psoriasis, and other inflammatory skin conditions. Ginger's antimicrobial and antiseptic properties can also kill the bacteria that causes acne. It promotes skin elasticity and firmness due to its antioxidants gingerol and shogaol, which have both been shown to fight skin-damaging free radicals.

To achieve these skin benefits, I advocate using actual ginger root. Why take capsules when you can use the root? It is cost-effective and has a great return on investment.

It's easy to use the root to make a cup of ginger tea. Peel the ginger root and cut it into thin strips. Steep the strips in a cup of boiled water for 10-15 minutes. If need be, sweeten the tea with other warming spices such as cinnamon and clove, along with agave nectar.

When you are unable to brew a cup of ginger tea, add a drop of ginger essential oil to your daily moisturizer. If you are looking at using it for other health benefits, such as reducing the pain of arthritis, you can massage the painful area with the essential oil. Please note essential oil is not for internal use.

Several new studies have also shown that ginger may help reduce anxiety. Not convinced yet about the benefits of ginger? Some say it could also work as an aphrodisiac, due to its promotion of blood circulation.

#### HUMMING!

Humming is relaxing and pleasurable. Humming sustained tones increases oxygen in cells, lymphatic circulation, endorphin release, nitric oxide levels, and melatonin. It also reduces blood pressure, heart rate, and stress hormones. Humming with intention, we can direct sound into areas of the body in need of healing. For further information, see *The Humming Effect: Sound Healing for Health and Happiness*, by Jonathan and Andi Goldman.
